(c) The Planning Commission estimates poverty from the large sample survey of household consumer expenditure data of the National Sample Survey Organisation (NSSO), which are available once in approximately five years. On the basis of provisional consumer expenditure data of 61st Round of the National Sample Survey (NSS), as reported in the draft Approach to the Eleventh Plan, the poverty ratio in 2004-05 is estimated as 27.8 per cent using Uniform Recall Period (URP, in which the consumer expenditure data for all the itmes are collected from 30 day recall period) and about 22 per cent using Mixed Recall Period (MRP, in which the consumer expenditure data for five non-food items, namely, clothing, footwear, durable goods, education and institutional medical expenses are collected from 365-day recall period and the consumption data for the remaining items are collected from 30 day recall period). The poverty estimates in 2004-05 based on URP consumption (27.8 per cent) is comparable with the poverty estimates of 1993-94, which was 36 per cent. The poverty estimates in 2004-05 based on MRP consumption (22 per cent) is roughly (but not strictly) comparable with the poverty estimates of 1999-2000, which is 26.1 per cent.
